

# Charge Anywhere® improves in-flight experience with mobile payment solution

PAYMENT FUNCTIONALITY SECURELY CAPTURES CREDIT AND DEBIT TRANSACTIONS IN-AIR

## CHALLENGE

Allegiant Systems is an independent aviation technology provider offering iPad-based cabin and cockpit solutions. Allegiant Systems' client, a small, regional carrier, regularly transports employees to operational sites via its fleet of aircraft and needed an in-flight solution for the sale of food and beverages. Allegiant Systems selected Charge Anywhere to provide payment functionality for its FlyDesk Cabin™ Buy-on-Board application.

## SOLUTION

Charge Anywhere provided a mobile payment solution for Allegiant Systems' client to enable food and beverage purchase in-flight. The Charge Anywhere payment functionality was seamlessly embedded into the FlyDesk Cabin™ Buy-On-Board application and provided:

- » Secure card capture
- » Payment security / card encryption services
- » Payment gateway services
- » Connectivity to payment processor of choice

Charge Anywhere's payment functionality securely captures transactions in-air and routes the encrypted transactions via its secure payment gateway at the conclusion of the flight.

*"Charge Anywhere's P2P encrypted payment solution delivers the highest level of payment security. Plus, it was easily integrated into our application, enabling us to deliver on our customer's expectation of a cost-effective, efficient implementation."*

— Brian C. Mooney, CEO  
Allegiant Systems

## RESULTS

Allegiant Systems' FlyDesk Cabin™ Buy-on-Board application can securely accept credit and debit payments as payment for food and beverage sales in-flight. Charge Anywhere's embedded payment functionality seamlessly handles thousands of transactions per month and is providing an improved customer in-flight experience. Charge Anywhere's payment solution also reduces the scope and cost of PCI compliance as its technology fully adheres to PCI standards.
